Merative / IBM Watson Health Dublin, Ireland | June 2022 – Present

Lead Full-Stack Software Engineer | June 2025 – Present

- Architectural Transformation: Directed the migration from legacy JSP/Oracle to Angular/PostgreSQL, decommissioning 10,000+ lines of technical debt and enabling real-time report editing.
- AI-Driven Development: Pioneered the integration of Claude Code and GitHub Copilot, utilizing AI as a force-multiplier to accelerate complex refactoring and automated test generation.
- Technical Leadership: Lead the technical direction for platform-wide optimizations while mentoring junior developers and bridging the gap between architecture and product requirements.

Senior Full-Stack Software Engineer | June 2022 – June 2025

- Performance Engineering: Achieved a 95% reduction in execution time (150s to 7.5s) for core compliance and audit trail reports through advanced query optimization.
- Product Innovation: Twice received the "Crushing It" award for developing a custom filtering system and Dashboard Summary that became a primary selling point for the sales team.
- Regulatory Compliance: Engineered a granular audit trail feature for data integrity, ensuring full compliance for enterprise clinical trial clients.

Full-Stack Software Engineer | Oct 2021 – June 2025

- Modernized Identity & Access Management: Led the migration of core login systems from legacy JSP to a modern Angular/Scala architecture. Implemented secure SSO and multi-factor authentication (MFA) to meet strict regulatory standards for clinical trial data.
- Engineered Enterprise Data & Reporting: Developed high-performance interactive data tables and a Scala-based scheduled reporting engine. Enabled automated, role-based delivery of customized data exports, improving data accessibility for researchers.
- Data Integration & Process Innovation: Built a specialized Angular interface for automated data transfers via SFTP and file-upload workflows. Streamlined complex data migration processes and reduced manual overhead for enterprise-scale clinical datasets.

Nokia Paris, France | Sept 2018 – Sept 2021

Software Engineer (Apprenticeship) | Sept 2018 – Sept 2021

- Engineered a React-based enterprise platform to automate course generation and file management, significantly streamlining training workflows for global teams.
- Integrated MS Graph API to handle seamless user authentication and automated SharePoint document management directly within the application.
- Architected an internal review system and responsive Material-UI interface to automate the deployment of vetted content while simplifying complex administrative workflows.

Core Stack: Angular, Scala, TypeScript, Java, PostgreSQL

HTML5 / SCSS / Javascript ES6+

Architecture & Leadership: Performance Engineering, Technical Leadership, AI-Assisted Development (Claude/Copilot), RESTful API Design.

Tools & Ecosystem: Git, Docker, Jira, Figma, Agile/Scrum.

.

Languages: English, French (native)

EDUCATION

Master's degree in Development & Software Engineering

AFORP - 2019 - 2021, Orsay France

Apprenticeship: 3 weeks per month at Nokia

Bachelor's degree in Web/Mobile development

University Institutes of Technology Paris-Saclay - 2018 - 2019, Orsay France

Apprenticeship: 3 days per week at Nokia

Associate degree in Computer Science

University Institutes of Technology Paris-Saclay - 2017 - 2018, Orsay France
